Nomad Technics installs a Ka-Band System on a Bombardier Global 6000

Basel, 30 September 2022 - Nomad Technics has successfully completed a Honeywell JetWave Ka-Band installation on a Bombardier Global 6000 in just four weeks.

Nomad Technics performed the installation of Honeywell's JetWave system, which included the hardware with the complete wiring, a new radome, the latest Satcom Direct SDR router and the integration of the Collins Cabin Electronics System (CES). The complex work is a challenge for each MRO company since a large number of system components has to be installed and connected inside and outside of the pressurized cabin with the cable holes properly sealed against leakage of air. Normally this job is performed during scheduled maintenance which eases the access to the aircraft's structure but in this case Nomad Technics has accomplished the installation outside of the planned maintenance without any prior provisions in a very short time.

The Ka-Band system allows passengers to use a high-speed internet connection of up to 15 MBps to hold video conferences, use social media and to stream music or videos while travelling in comfort on short or long global flights.

„The Nomad Technics Avionics engineers, mechanics, sheet metal and cabin specialists performed this demanding job in a record time of just four weeks.“, says Christian Sacker, Director Quality & Compliance of Nomad Technics. Thomas Gierlich, the company's Director Sales adds: „We are very proud of this achievement by our dedicated and highly skilled team and look forward to welcoming other owners and operators at our Basel/Switzerland facility to install the system on their aircraft.“

About Nomad Technics AG:

Nomad Technics AG, the maintenance division of Nomad Aviation AG based in Basel/Switzerland, is an EASA Part-145 approved organization (Approval No. CH.145.0386) and provides maintenance inspection and non-routine repair work on Bombardier Challenger 300, 604, 850 series, Bombardier Global XRS, Global 5000, Global 6000 and Embraer Legacy 600 and 650 business jets as well as line and base maintenance work on the Airbus A320 family and Boeing 737NG series.

The company occupies its own 5'100 m² hangar together with 6'800 m² of additional ramp space at the International EuroAirport in Basel / Switzerland. In addition to maintenance the company provides hangarage and parking services for aircraft up to the size of the Airbus A320 family and Boeing 737 series. Disinfection of any type of business jets is also on offer.
