Nomad Technics performs 144-month inspection and cabin refurbishment on an Embraer Legacy 650 business jet.

Basel / Switzerland, February 01, 2025 - Nomad Technics has recently completed a 144-month inspection and cabin refurbishment on an Embraer Legacy 650 aircraft.

The 144-month inspection is one of the most in-depth work on the Embraer Legacy 650, and requires special tooling, equipment and knowledge of the airframe to complete the job successfully. This maintenance project was undertaken by Nomad Technics at its Basel/Switzerland facility and included an extensive corrosion inspection of the aircraft's primary and secondary structures, functional and operational tests of systems and furthermore the implementation of Service Bulletins and Airworthiness Directives. The landing gear underwent a complete overhaul. In addition, the customer requested Nomad Technics for a full cabin refurbishment. In cooperation with F/LIST, a leading aircraft interior company the new cabin was fully customized to the client's specification. This included full seat re-upholstery, re-veneering of all woodwork, installation of a new stone floor and new countertops in the galley and lavatory, new carpet, ceiling and sidewall panels and plating of all metal parts.

„The successful completion of this demanding 144-month inspection on the Embraer Legacy 650 is another great milestone for Nomad Technics, which will enable us to further enhance our capabilities to offer and execute maintenance and cabin refurbishments“, says Thomas Gierlich, CEO of Nomad Technics and adds: „We are very proud of our Embraer maintenance team and the entire organization behind it who have been performing extremely well. It will be our great pleasure to welcome owners and operators of Embraer, Airbus, Boeing and Bombardier business jets at our Basel facility to demonstrate our highly skilled VVIP aircraft maintenance and refurbishment services.“
